

MIMO Channel Modeling in Wireless Communications and its Applications

Marko Milojević

Dissertation zur Erlangung des
akademischen Grades Doktoringenieur (Dr.-Ing.)

Anfertigung im: Fachgebiet Nachrichtentechnik
Institut für Informationstechnik
Fakultät für Elektrotechnik und Informationstechnik

Gutachter: Univ.-Prof. Dr.-Ing. Martin Haardt
Prof. Dr.-Ing. Albert Heuberger
Prof. Dr.-Ing. Armin Dekorsy

Vorgelegt am: 09.11.2010

Verteidigt am: 19.04.2011

Contents

Preface	i
Abstract	iii
Zusammenfassung	v
Contents	vii
List of Figures	xi
List of Tables	xvii
1. Introduction	1
1.1. State of the Art	1
1.2. Overview and Contributions	4
2. MIMO Systems and MIMO Channels	7
2.1. MIMO Systems in Wireless Communications	7
2.1.1. Spatial Processing Techniques	8
2.2. The Deterministic Description of the MIMO Channels	12
2.2.1. The First Set of Bello Functions	12
2.2.2. Bello Functions Extended to the Spatial Domain	15
2.2.3. The Full MIMO Channel Description	19
2.2.4. Polarization	23
2.2.5. The Sampled Frequency-Selective Time-Variant MIMO Channel	24
2.3. Stochastic Characterization of Multi-path Channels	24
2.3.1. Stochastic Process Theory	24
2.3.2. Stochastic Description of the Full MIMO Channel	25
2.3.2.1. The Power Delay Spectrum	27
2.3.2.2. The Autocorrelation Function in Frequency Domain	29
2.3.2.3. Doppler Power Spectrum	31
2.3.2.4. The Autocorrelation Function in Time Domain	32
2.3.2.5. Power Angular Spectrum	33
2.3.2.6. The Autocorrelation Function in Spatial Domain	35

2.3.3.	The Sampled Autocorrelation Function of Frequency-Selective Time-Variant MIMO Channel	36
3.	Modeling of the MIMO Channels	37
3.1.	Channel Models Classification	37
3.2.	Deterministic Channel Models	41
3.3.	Analytical Channel Models	42
3.3.1.	Full Spatial Correlation Matrix Channel Model for Frequency-Non-Selective Time-Invariant Channels	43
3.3.2.	The Kronecker Channel Model	44
3.3.3.	The Weichselberger Channel Model	46
3.3.4.	A Subspace-Based Channel Model for Frequency-Selective Time-Variant MIMO Channels	47
3.3.4.1.	The Channel Model Validity and Channel Parametrization	50
3.3.4.2.	A Physical Interpretation of the Eigenmodes	54
3.3.4.3.	Correlation in Frequency and Time	56
3.3.5.	A Correlation Tensor-Based Model for Frequency-Selective Time-Variant MIMO Channels	59
3.4.	Hybrid Channel Models	62
3.4.1.	COST 259 Directional Channel Model	62
3.4.2.	IST METRA Channel Models	64
3.4.3.	IEEE 802.11n Channel Model	65
3.4.4.	The IlmProp Channel Model	66
3.4.5.	3GPP Spatial Channel Model (SCM)	67
3.4.6.	WINNER Spatial Channel Model Extended (SCME)	71
3.4.6.1.	Bandwidth Extension	73
3.4.6.2.	Extension of the Frequency Range	74
3.4.6.3.	LOS Option and Time Evolution	75
4.	WINNER Channel Models (WIM)	79
4.1.	Introduction to the WINNER Channel Models	80
4.2.	WIM Modeling Approach	81
4.2.1.	The Network Layout	86
4.2.2.	Modeling the Time Evolution	86
4.2.3.	Inter-Dependence of Large-Scale Parameters	88
4.2.4.	Modeling of the Nomadic Channel Condition	90
4.2.5.	WIM 3D Antenna Array Model	91
4.2.5.1.	The Description of 3D Antenna Arrays	91
4.2.5.2.	Integration of 3D Antenna Arrays in the WIM Channel Model	96

4.2.6.	WIM Models With Reduced Complexity	97
4.2.6.1.	WIM Clustered Delay Line Models	98
5.	Channel Modeling for Multiple Mobile Satellite Broadcasting Systems	99
5.1.	Satellite Digital Audio Radio Systems XM Radio and Sirius	102
5.1.1.	XM Radio	103
5.1.2.	Sirius Satellite Radio	103
5.1.3.	Measurements of XM Radio and Sirius S-DARS Systems	104
5.2.	Channel Model for Single and Two Satellite Systems Based on the First Order Markov Chains	106
5.2.1.	Channel State Model for Single Satellite Systems	106
5.2.2.	Channel State Model for the Two Satellite Systems	108
5.2.3.	The Channel Amplitude Modeling	111
5.2.4.	Correlation and State Duration Properties of the Measured S-DARS Channels	112
5.2.4.1.	Correlation Coefficient Between Two S-DARS Satellites	113
5.2.4.2.	Spatial Autocorrelation Function of S-DARS Satellites	113
5.2.4.3.	Channel State Duration of the S-DARS Systems	115
5.2.5.	Environmental Influence on the Noise Power	117
5.3.	The State Duration of the Markov Chain Based Channel Models	117
5.3.1.	The PDFSD Modeling Based on Dynamic Order Markov Chains	121
5.3.2.	Dynamic SPTM Model Approximations	123
5.3.2.1.	Partial Dynamic SPTM Model	124
5.3.2.2.	Approximated Partial Dynamic SPTM Model	125
5.3.3.	PDFSD Based Channel State Generation Algorithm	127
5.4.	The PDFSD Modeling for Multiple Satellite Systems	128
6.	Spatio-Temporal Availability in Satellite-to-Indoor Broadcasting	131
6.1.	Introduction	132
6.2.	Satellite-to-Indoor Channel Model	133
6.2.1.	System Model for Simulation Setup	133
6.2.2.	The Ray Tracing Engine WinProp	134
6.2.3.	Geometry-Based Channel Modeling	135
6.2.4.	Polarization and Different Antenna Configurations	139
6.2.5.	Frequency Selectivity of Studied Channels	139
6.2.6.	Temporal Variation of the Satellite Link	140
6.2.7.	Signal Availability	141
6.3.	Performance Comparison of Different Receive Antenna Schemes	142
6.3.1.	Ray Tracing Results for Vertical Dipole	142
6.3.2.	Spatial Correlation of Multi-Antenna Configurations	143

6.3.3. Signal Availability for Different Receive Antenna Configurations	146
6.3.4. Influence of Windows on the Availability	153
6.3.5. User Interaction	155
6.3.6. Influence of Temporal Variation on Signal Availability	156
7. Applications of the Channel Modeling on the Channel Prediction and Channel Interpolation	159
7.1. On the Channel Prediction	159
7.2. Subspace-Based Framework for the Prediction of Frequency-Selective Time-Variant MIMO Channels	160
7.2.1. Subspace-Based Channel Prediction Framework	161
7.2.1.1. Filter Structures	163
7.2.2. Propagation Scenario for Simulations	164
7.2.3. Simulation Results	165
7.3. Tensor-Based Framework for the Prediction of Frequency-Selective Time-Variant MIMO Channels	168
7.3.1. Tensor-Based Channel Prediction Framework	169
7.3.2. Simulation Results	172
7.4. Interpolating the Channel	174
8. Conclusions	177
Appendix A. Mathematical Operators	179
A.1. The Scalar Product	179
A.2. The Vector Product	179
A.3. The Kronecker Product	180
Appendix B. Higher-Order Signal Processing Calculus	181
B.1. Tensor Properties	181
B.2. The Outer, n -Mode, and n -Mode Inner Tensor Products	183
B.3. Higher Order Singular Value Decomposition (HOSVD)	185
Appendix C. Generation of WIM Channel Coefficients and WIM Parameters	187
C.1. Generation of WIM Channel Coefficients	187
C.2. WIM Parameters	194
Appendix D. Glossary of Acronyms, Symbols, and Notation	197
Bibliography	203
